- Follow steps given in the ReadMe.md of Git to make the environment ready to run the application.
- Once application started running on local server, following features are available in the aplication
    - User will redirect to Home Page.
    - No options available for guests.
    - User need to sign-up first. Options for sign-up and sign-in are provided at top right corner.
    - Other than creating account, user can edit password, upload / change profile image and edit personal details.
    - All these options are available in the drop down menu which will be shown after clicking on user name.
    - Once signed-in, two options will be provided to the user on left-side top corner.
    - The options will be :
        - Manage Lessons
        - Maintenance
    - In Maintenance tab, user will be able to add schools, grade (classes), sections and subjects.
    - User can also click on Show button for each of the above mentioned category to list all the schools, grades, sections or subjects.
    - In Manage Lessons section, user will be able to either upload excel or can see and modify data of already uploaded excel.
    - To upload excel, user needs to click on "Add Lessons". Options for uploading excel files will be prompted and user can browse local excels files and upload them.
    - The format of excel is standard in order to avoid garbage data. The sample-excel file is uploaded on git.
    - Once file is uploaded, User will be prompted to save the data of the file into our database.
    - Once user clicked on "Save" button, data will be saved in our database while excel file will be present in uploads-done section of our server.
    - Now as the data is inserted from excel to our database, user will be able to see the inserted data and modify the Standard Lesson Name.
    - For listing data, user will need to select, subject name and grade / class name.
    - All the files related to the selected grade and subject will be listed and available for modify.
    - Once modified and saved, latest file for the same selection will be visible to the user.
